Final Deliverable – Software Requirements Specification

Team Name: *Pixel Engineers.*

Team Member

Name	ID	Role
Diaa Mohamed Hassan Diab	20720236074	Front-end Developer
Ziad Mohamed Morad Riad	20720236059	Front-end Developer
Taha Mahmoud Mohammed	20720236076	Front-end Developer

1. Project Title

Ordering online food app

2. Problem Statement

Many small restaurants still depend on manual order handling, phone calls, and paper-based tracking, which leads to errors, delays, and poor customer experience. Customers cannot easily track orders or know their status in real time. Delivery management is also inefficient due to lack of coordination between restaurant staff and delivery personnel. This system aims to automate the food ordering, order tracking, and delivery process using a simple web-based solution.

3. Project Scope

In Scope

- *User authentication (Admin, Customer, Delivery Person)*
- *Browsing food menu*
- *Cart management*
- *Place order with Cash on Delivery*
- *Order cancellation (before delivery)*

- *Admin order approval and status update*
- *Delivery assignment and order completion*
- *Reports generation*
- *Dark / Light mode*
- *Arabic & English language support*
- *Local Storage data handling*

Out of Scope

- *Online payment gateways*
- *Real-time GPS tracking*
- *Mobile native application*
- *Push notifications*

4. Users / Stakeholders

User Type	Role in System
Admin	**Manages orders, assigns delivery, generates reports**
Customer	**Browses food, places orders, cancels orders**
Delivery Person	**Receives delivery tasks and updates order status**

5. Functional Requirements

Provide 5–10 essential functional requirements.

Example structure:

Requirement Name	*Description*	*Priority*
User Login	*The system shall allow users to log in based on their role*	*High*
Add to Cart	*Customers can add/remove food items from cart*	*High*
Place Order	*Customers can place orders using Cash on Delivery*	*High*

Track Order	*Customers can track order status*	*Medium*
Cancel Order	*Customers can cancel orders before delivery*	*Medium*
Approve Order	*Admin can approve or reject orders*	*High*
Assign Delivery	*Admin assigns orders to available delivery persons*	*High*
Update Status	*Delivery person updates order to "Delivered"*	*High*
Browse Menu	*Customers can view available food items*	*High*
Generate Reports	*Admin can view daily or monthly order reports*	*Low*

6. Non-Functional Requirements

Category	*Description / Requirement*
Performance	*The system should handle up to 100 simultaneous users.*
Security	*User data stored securely in browser Local Storage*
Usability	*The interface should be simple and intuitive.*
Reliability	*System should not lose data during page refresh.*
Maintainability	*Code should be modular and commented*
Portability	*Works on modern web browsers (Chrome, Edge, Firefox).*

7. Technologies & Tools

List the tech stack your team plans to use.

Type	Tools / Technologies
Front-End	HTML, CSS, JS
Back-End	Not applicable (Client-side only)
Database	Browser Local Storage
Tools	Visual Studio Code
Other Resources	Font Awesome, Google Fonts,Unsplash

8. Core Use Cases

Use Case 1: Place Order

- ***Actor: Customer***
- ***Description: Customer selects food items, adds them to cart, and places order.***
- ***Precondition: User is logged in as Customer***
- ***Postcondition: Order saved with status "Pending"***

Use Case 2: Approve Order

- ***Actor: Admin***
- ***Description: Admin reviews and approves customer orders.***
- ***Postcondition: Order status updated to "Approved"***

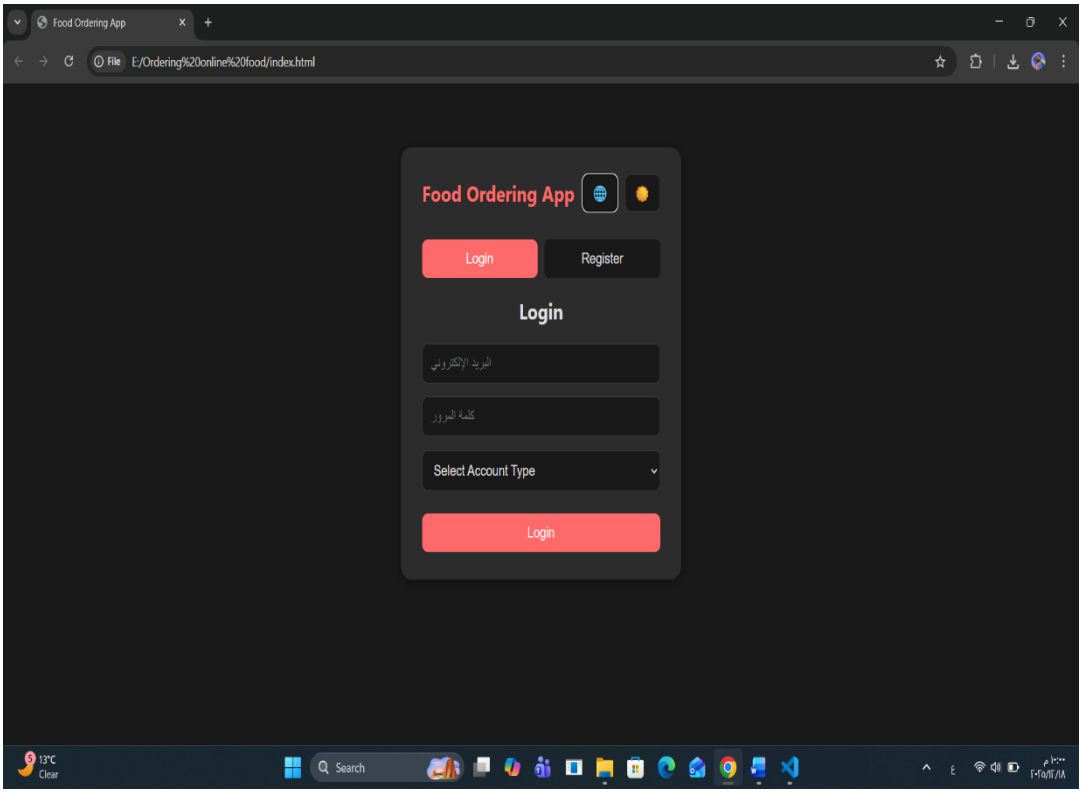

Use Case 3: Deliver Order

- ***Actor: Delivery Person***
- ***Description: Delivery person delivers order and marks it as completed.***
- ***Postcondition: Order status updated to "Delivered"***

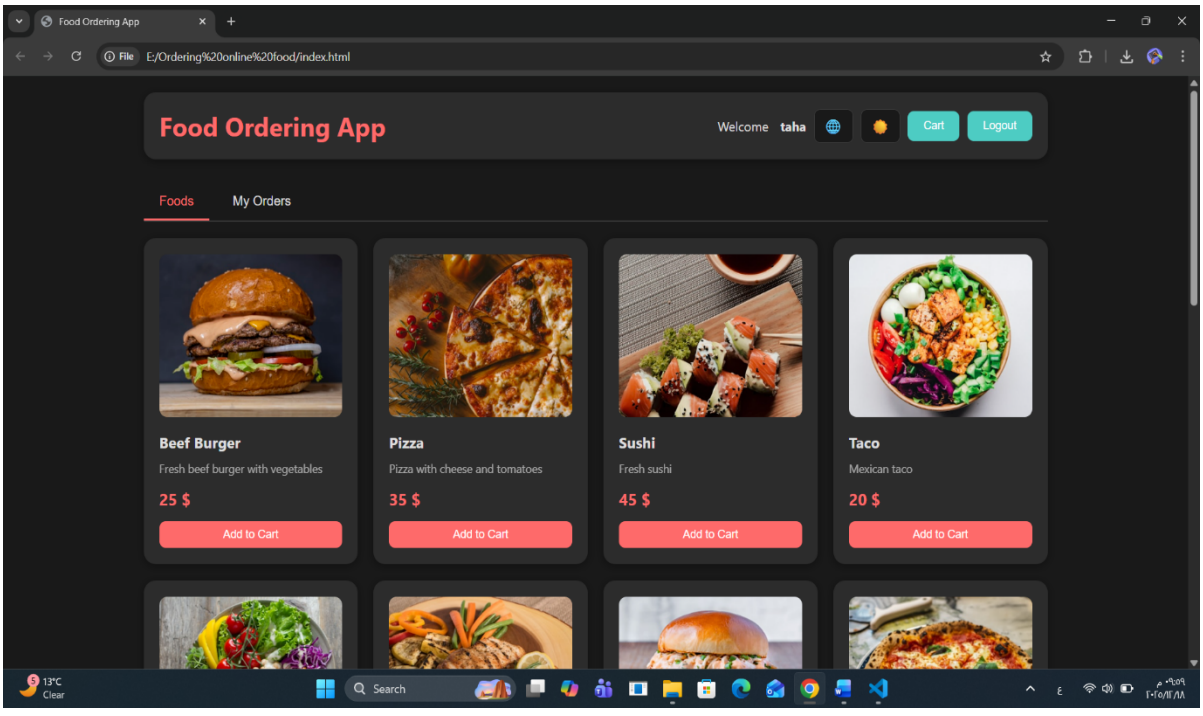

9. Prototype Screens

Prototype Screenshots / Sketches
